

Filippo Palandri

I'm a quantitative economist, focused on econometrics and data science.

Here  you can find my projects in Python, SQL and R using machine learning and predictive models.

Date of birth : 10/07/2000 (Day-Month-Year)

EDUCATION

University of Bologna

Bologna, Italy

- *MSc in Economics and Econometrics, grade of the thesis: 5/5, final grade: 109/110 September 2022 - December 2024*

Relevant coursework: Microeconometrics, Macroeconometrics, Financial Econometrics, Python for Economists, Asset Pricing, Machine Learning for Economists, Financial Products and Markets, Statistics for High dimensional data, Macroeconomics, Mathematical Economics

University of Florence

Florence, Italy

- *BSc in Economics, grade of the thesis: 3/3, final grade: 110/110 September 2019-October 2022*

Relevant coursework: Data science for economics, Introduction to Econometrics, Statistics, Introduction to Probability, Financial mathematics, Corporate Finance, Computational Economics with Python

WORK EXPERIENCE

Research Associate in Finance, Bocconi University

Milan, Italy

- *Department of Finance, Supervisor: Prof. Florian Nagler June 2025 - May 2026*
 - **Data collection:**
 - * conducted large-scale data extraction on corporate bond issuances using the Refinitiv Eikon API (**Python**) | , integrating multiple financial datasets and developing automated web scraping pipelines.
 - * Retrieved and consolidated firm-level financial and operational data from the S&P Capital IQ database through bulk downloads using the Excel add-in.
 - **Data wrangling, EDA, Data visualization:**
 - * conducted empirical research in Corporate Finance/Industrial Organization analyzing the evolution of the underwriting market, working with multiple large datasets (**R**) | 
 - **Statistical analysis:**
 - * performed regression analysis to analyze the underwriting market.
 - * processed and analyzed large corporate bond datasets, integrating U.S. Treasury yield curves and estimating bond-specific risk-free rates by matching each security to the closest point on a fitted Nelson–Siegel–Svensson yield curve (**Python**) | 

PROJECTS

- Non-Gaussian shocks and recursive monetary policy SVARs for the Euro Area (Master's thesis) (**R**, **MATLAB**) | 
 - * *Models used: Structural Vector Autoregression Model (SVAR) identified through Non-Gaussianity.*
- Fraud detection with machine learning (**Python**) | 
 - * *Models used: Logistic regression, Classification trees, Random forest.*
- Comparison of OLS, Ridge, and Lasso Machine Learning Models Using Simulated Data (**Python**) | 
 - * *Models used: Ridge, Lasso, OLS.*
- High-dimensional data analysis of a wholesale distributor (**R**) | 
 - * *Models used: PCA, Cluster Analysis.*

COMPUTER SKILLS

- **Programming:** Python (scikit-learn, NumPy, pandas, Matplotlib, Seaborn), R, SQL.
- **Editors:** L^AT_EX, VS Code, PyCharm, Jupyter Notebook.
- **Productivity:** Word, Excel, Power Point, Outlook.
- **Databases:** LSEG Refinitiv, WRDS, Mergent FISD, S&P Capital IQ.

LANGUAGES

- Italian: Native speaker
- English: Proficient
- Spanish: Beginner
